Successful summit meeting: Gummiwerk KRAIBURG at DKT 2018 in Nuremberg

The German Rubber Conference (DKT) in Nuremberg was a complete success this year again for Gummiwerk KRAIBURG GmbH & Co. KG. At the international event from 2 – 5 July 2018 KRAIBURG, one of Europe's leading manufacturers of rubber and silicone compounds, presented expansions to the product portfolio, advanced developments of cleaning compounds for injection moulding machines and fouled vulcanisation moulds, as well as innovations for the lightweight construction industry.

In addition to raw materials, compounds, processing and inspection, the agenda at this year's conference also included current trends such as sustainability, new technologies and increasingly dynamic markets. The conference is attractive not only due to the opportunities for sharing experiences and presenting new products, but also due to the participation of international visitors and exhibitors. All of these are important reasons for KRAIBURG to attend the conference. The focus of the impressive exhibit at the 85m² booth was on the product diversity of high-quality rubber and silicone compounds. Visitors had the opportunity to gain first-hand information and advice about the solutions offered by KRAIBURG.

The most important new products and developments

Innovative concepts combined with diverse application possibilities, such as expansion of the product portfolio to include compounds with a perfluorelastomer (FFKM) base to fulfil requirements that far exceed those of standard elastomers, attracted many visitors to the booth.

Also this year KRAIBURG presented cleaning compounds for cleaning fouled vulcanisation moulds, KRAIBON® a material with excellent adhesion to FRP (FRC, GFRP, SMC, etc.) as well as metals, in addition to the advanced development of an optimal bond between fabric and rubber designed with new properties to withstand extreme pressure conditions, which makes it ideal for use in hoses.

With pioneering ideas and custom-tailored solutions the company forges ahead for the benefit of its customers and partners. This was also the subject of intense discussion at the exhibition booth. Optimal conditions for such promising relationships were created on the basis of stimulating inspirations and innovations.

Gummiwerk KRAIBURG GmbH & Co. KG

Gummiwerk KRAIBURG GmbH & Co. KG, a company of the KRAIBURG Group, has been producing rubber compounds since 1947. Today, the company offers compounds based on virtually all elastomer types, including silicone and fluoroelastomers for all common dry rubber processing technologies. KRAIBURG compounds are used in the automotive sector, in machine construction, oil and gas production, roll production and by numerous other manufacturers of moulded rubber components.
